Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /SIDS1/gcgdata/geneseq/geneseqp-embl/AA2000.DAT:*/SIDS1/gcgdata/geneseq/geneseqp-embl/AA2001.DAT:*/SIDS1/gcgdata/geneseq/geneseqp-embl/AA2002.DAT:* /SIDS1/gcgdata/geneseq/geneseqp-embl/AA2003.DAT

                                  The present sequence is a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombior apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively reheate a radiouncilde and retain annexin bloactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                          chelation site, which comprises an amino acid extension including a splicine and a cystelne residue. The modified annexin is useful for imaging vascular thrombi or apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radionuclide and retain annexin holoactivity. It can be readily prepared in high radiochemical yield and with high radiochemical purity. In distribution of conjugation chemistries that provide a chelation site remote from the site of biological activity.

                                                                                                                                             The present sequence is a modified annexin having an N-terminal chelation site, which comprises an amino acid extension including a glycine and a cysteine residue. The modified annexin is useful for imaging vascular thrombi or apoptosis which is associated with response to a chemotherapeutic agent or with rejection as a result of transplantation. The modified annexin can effectively chelate a radiouncilde and retain annexin bloactivity. It can be readily prepared in high radiochemical purity. In contrast to conventional conjugation chemistries that provide a distribution of conjugation products, the modified annexin has a single chelation site remote from the site of biological activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                           This polypeptide exhibits strong anticoagulant activities and is useful for the treatment and prevention of e.g. thrombosis or disseminated intravascular coagulation in the brain, heart and peripheral blood vessels, such as cerebral and myocardial infarction. It has no antigenicity against man and can be produced in large amts. using
                                                                                                                                                                                                                                                                                  Recombinant placental coagulation inhibitor – useful for the preventior and treatment of thromboses or disseminated intra-vascular coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8 MAQVLRGTVTDFPGFDERADAETLRKAMKGLGTDEESILTLLTSRSNAQRQEISAAFKTL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This vascular anti-coagulating protein (VAC)-alpha is used in the preparation of monoclonal antibodies (MAbs). The VAC-alpha is injected into a host animal, in conjugation with eap keyhole limper haemocyanin, and the B-cells from immunised hosts are then fused with myeloma cells. The resultant hybridomas (VAA-8 and VAA-9) produce Abs specific to VAC-alpha. Abs can be used as immunossay reagents to detect VAC proteins, as affinity ligands for protein purifico, and as medicaments for binding and/or neutralising VAC proteins in vivo. See also AAN91354 and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents an example of a protein of the invention.

The proteins are bifunctional Aequorea victoria green fluorescent protein composed annexin fusion proteins, where the GFP and annexin moleties provide greater or equal fluorescent intensity and anionic phospholipid binding affanity, respectively, than do the corresponding unfused GFP and annexin proteins. An early manifestation of apoptosis is the loss of the proteins. An early manifestation of apoptosis is the loss of the proteins of anionic phospholipids on the extracellular leaflet of the plasma membrane. The GFP-annexin V fusion proteins are used for the detection of apoptotic cells by flow cytometry or fluorescent microscopy. The fusion proteins provide for homogeneously labelled annexin, with fluorescence properties that do not change upon binding membrane phospholipids, unlike prior art FITC-labelled annexins, where quenching or FITC-annexin V fluorescence by 40-50% occurs upon binding phospholipid

Annexin; phospholipid; antithrombotic; antitumor; antinflammatory; coating; thrombogenic biomaterial; labelling compound; negative charge.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents an annexin polypeptide. The domain of annexin, which may be modified, is used to construct the chemical compounds of the invention. The specification describes chemical compounds which have an affinity for a phospholipid. The chemical compounds comprise at least one chemical platform comprising six residues supporting a set of chemical functions that are capable of binding to the phospholipid and at least partly define the affinity of the structure for the phospholipid. The compounds act as phospholipid sequesters. The compounds are useful for preparing antithrombotic, antitumor and antiinflammatory medicaments, for making coatings for thrombogenic binmaterials, and for preparing labelling compounds useful for analysing and detecting negative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chemical structure having affinity for phospholipid comprises chemical platform comprising six residues supporting set of chemical functions that are capable of binding to phospholipid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Guerois
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cordier OF,

derivatives or fragments. Protein Kinase C (PKC) is a key enzyme in signal transduction involved in a variety of cellular functions including cell growth, regulation of gene expression and ion channel activity. The coll growth, regulation of different PKC isozymes to different areas of the cell in turn appears due to binding of the activated isozymes to the specific anchoring molecules (RACKS). Peptides that miller either the PKC-binding site on RACKS or the RACK binding site on PKC are isozyme specific translocation inhibitors of PKC. The disclosed peptides are useful in activating or inhibiting translocation or function of deltaPKC. The deltaPKC agonists or antagonists are useful in reducing, enhancing or protecting against damage to cells or tissues due to ischaemic or hypoxic event caused by stroke. Acute administration of the peptides, conjugated to a carrier peptide or a Tat-derived peptide, protected hearts against ischaemic damage as shown by decreased release of creatine kinase. The data indicate that in an intext heart, inhibition of deltaPKC conferred greater than 50% protection against ischaemic damage. The sequence presented is human annexin V, which contains a delta RACK binding site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                     Annexin V, which has high affinity for active thrombocytes, is used as a carritar molecule to build a thrombus-targething thrombolytic fusion protein. The protein (this sequence) is the result of expression of a fusion gene comprising the Annexin V gene and a low-molecular urokinase gene, in theset cells. The Annexin V-scu-pa.32 fusion protein, expressed in insect cells if the Annexin V-scu-pa.32 fusion protein, expressed in insect cells it. A, has high affinity for active thrombocytes and has the fibrinolytic activity of urokinase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     OAGELKWGTDEEKFITIFGTRSVSHLRKVFDKYMTISGFQIEETIDRETSGNLEQLLLAV
                                                                                                                                                                                                                                                                                                                     The protein does not contain a leader peptide sequence, indicating that PAP-I is probably not constitutively secreted. The Met residue is removed at in a post-translational event and the newly formed NH2-terminal Ala residue is blocked by acetylation. It binds to phospholipid and inhibits phopholipase A2. The protein can substitute heparin or other anticoagulants in the treatment of disseminated intravaccular coagulation, deep vein thrombosis, or other disorders. It also has antiinflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 320;

                                                                                                                                                                                                                                                                                                                                                                                                              The sequence given is the amino acid sequence of CPB-I. CPB-I was used within a method which involved adding basic amino acids to it which resulted in its stabilisation. This lead to the production of CPB-I which keeps is activity when it is frozen, molten or has been processed by several procedures. (Updated on 10-MAR-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Calphobindin I; CPB-I; Protein kinase C; PKC; inhibition; tumour.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9 AQVLRGTVTDFPGFDERADAETLRKAMKGLGTDEESILTLLTSRSNAQRQEISAAFKTLF
                                                                                                                                                                                                                                                                             The invention relates to eye drops contain CPB-1 (anexin V) and a polyhydric alcohol having a carbonyl value of not more than 5micro Mol./g. The eyes drops are for treating e.g. corneal diseases. Such eye drops are without unpleasant irritation upon dropping but wi satisfactory long-term storage stability. The present sequence is the human CPB-1 (calcium/phospholipid binding) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                    -1- FUNCTION: MAY ASSOCIATE WITH CD21. MAY REGULATE THE RELEASE OF CA(2+) FROM INTRACELLULAR STORES.
-1- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-1- MISCELLANBOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY
-1- SIMILARITY: CONTAINS 8 annexin repeats.
                                                                                                                          Mus musculus (Mouse).

                             MISCELLANEOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY.
SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
SIMILARITY: Contains 8 annexin repeats.
CA(2+) FROM INTRACELLULAR STORES.

DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
                                                                                                                                                                                                                                                                                                                                                                      ö

Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: CALCIUM/PHOSPHOLIPID-BINDING PROFEIN WHICH PROMOTES.
MEMBRANE FUSION AND IS INVOLVED IN EXOCYTOSIS (BY SIMILARITY).
-!- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-!- MISCELLANEOUS: SEEMS TO BIND ONE CALCIUM ION WITH HIGH AFFINITY (BY SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
-!- SIMILARITY: Contains 4 annexin repeats.

-1- SUBUNIT: Monomer.
-1- SUBUNIT: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-1- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-1- SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
-1- SIMILARITY: Contains 4 annexin repeats.
                                                                                                                                                                                                                                                                                         Bos taurus (Bovine).
